

A Cosmic Microwave Background (CMB) fluctuation map showing temperature variations across the sky. The background is a vibrant, abstract pattern of reds, oranges, and yellows. In the lower-left quadrant, there is a distinct, circular region with a complex, multi-colored pattern of blues, greens, and purples, overlaid with a grid of white lines. This region represents a specific area of interest in the CMB data.

WE/SYSTEMS

LEARN UNCERTAINTY

by Polina Rud

generative art is about the boundary
between control and unpredictability.

1. THE LOSS OF GUARANTEES

- Why the loss of guarantees becomes one of the deepest existential shocks in history.
- How cultures invent tools — ritual, faith, chance, calculation — to negotiate the unknown.

3. WHEN ERROR BECOMES INFORMATION

- When control shifts from the artist's hand to rules, instructions, and systems. How authorship dissolves into execution, delegation, and feedback.

2. FROM ABSURDITY TO INSTRUCTION

- When randomness stops being chaos and becomes a method.
- How art begins to design conditions for emergence instead of fixed meanings.

4. DESIGNING SYSTEMS

- When form is no longer composed, but generated.
- How algorithms, emergence, and on-chain systems redefine what an artwork is..

An aerial photograph of a river delta, showing a complex network of winding waterways and sediment deposits. The water is a deep blue, while the land is a mix of brown and tan. A semi-transparent purple rectangular box is positioned in the lower-left quadrant of the image, containing the title text in white. The text is arranged in two lines: the first line is in all caps and the second line is in title case.

THE LOSS OF GUARANTEES AND THE LEGITIMATION OF CHANCE

Robert Hodgins

chance and chaos were

chance and chaos were
understood as creative tools,
as natural or spiritual forces.

Technē & Tychē

Art as a form of knowing

Aristoteles

Innovation was heresy.
Uncertainty is resolved in advance through faith.

The "transparent" divine plan
was no longer so transparent.

No divine guarantee.
No instruction.
You are now the author.
This may involve risk.

If Giotto and Sol LeWitt ever met, they'd be surprised how well they agree.

The scenes are no longer closed and doctrinally fixed; they become open to interpretation

Three Books of Occult Philosophy

Heinrich Cornelius Agrippa
Theophania Publishing

magia sympathetica — a vision of the world as a network of hidden correspondences, where causality is not linear but distributed

chance becomes
a signal of complexity

Randomness becomes a commodity.

Risk is evaluated, the future is translated into percentages, and uncertainty is built into calculation

Even Rembrandt becomes
entangled in financial expectations
and investment risk

Randomness
became my co-
author.

Wolfgang Amadeus Mozart

The rational scheme of society proves incapable of guaranteeing humanity.

The collapse of absolute
foundations
of truth and meaning.
Interpretation becomes unstable

Friedrich Nietzsche "God is dead"
in Thus Spoke Zarathustra

Werner Heisenberg's uncertainty principle
shows that randomness is
a fundamental property of reality itself.

Alicia Ross

According to Bohr, in some experiments,
particles behave like waves;
in others, like particles.

KEY TAKEAWAYS

- Uncertainty is a constant in human history, but our ways of relating to it change — from ritual and faith, to calculation, to systems and algorithms.
- Chance is not always the opposite of order. Across history, it shifts from being a creative force, to something suppressed, to something designed into systems.
- Authorship emerges together with risk. When divine and traditional guarantees collapse, the artist becomes responsible for meaning — and for being wrong.
- Modernity turns uncertainty into a calculation, pricing risk through probability, insurance, and speculation — without eliminating existential doubt.
- Scientific revolutions dismantle determinism. Quantum physics shows uncertainty as structural, not a flaw of knowledge, and makes the observer part of the system.

The background is a complex, abstract composition. It features a dense, swirling pattern of organic, marbled shapes in shades of blue, green, and brown. Overlaid on this is a faint, dark grid of thin lines. Scattered throughout the grid are small, white plus signs (+). The overall effect is one of intricate, chaotic detail.

FROM ABSURDITY TO INSTRUCTION: WHEN RULES REPLACE MEANING

Robert Hodgkin

A painting depicting a large, rectangular conference table covered with a vibrant red cloth. Several men in dark suits are seated around the table, their faces partially obscured or in shadow. The table is equipped with numerous microphones and small white objects, possibly coffee cups or documents. The perspective is from an elevated position, looking down the length of the table. The overall atmosphere is formal and serious.

Ambitious New Plans
Jules de Balincourt

reality is not obliged to be
meaningful

MANIFESTE DADA 1918.

Pour lancer un manifeste, il faut vouloir A.B.C. foudroyer contre 1. 2. 3.

Note. — Ce manifeste a été lu par Tristan Tzara le 23 juillet à la Meise Zurich. — Le Dadaïsme. — Les artistes sont maintenant d'accord. Ce qui est nouveau leur rendit impossible compréhension et puissance de séduire l'habitué de se tirer facilement d'affaire. — Ce manifeste a été lu par Tristan Tzara le 23 juillet à la Meise Zurich. — Le Dadaïsme. — Les artistes sont maintenant d'accord. Ce qui est nouveau leur rendit impossible compréhension et puissance de séduire l'habitué de se tirer facilement d'affaire.

s'énervent et aiguïser les ailes pour conquérir et répandre de petits et de grands a.b.c. signer, crier, jurer, arranger la prose sous une forme d'évidence absolue, irréfutable, prouver son nonplus-ultra et soutenir que la nouveauté ressemble à la vie comme la dernière apparition d'une cocotte prouve l'essentiel de Dieu. Son existence fut déjà prouvée par l'acordéon, le paysage et la parole douce. ■ Imposer son A.B.C. est une chose naturelle, — donc regrettable. Tout le monde le fait sous forme de cristalbluffmadone, système monétaire, produit pharmaceutique, jambe nue conviant au printemps ardent et stérile. L'amour de la nouveauté est la croix sympathique, fait preuve d'un j'enfoutisme naïf, signe sans cause, passager, positif. Mais ce besoin est aussi vieilli. En documentant l'art avec la suprême simplicité: nouveauté, on est humain et vrai pour l'amusement, impulsif vibrant pour crucifier l'ennui. Au carrefour des lumières, alerte, attentif en guettant les années, dans la forêt. ■ J'écris un manifeste et je ne veux rien, je dis pourtant certaines choses, et je suis par principe contre les manifestes, comme je suis aussi contre les principes (désilites pour la valeur morale de toute phrase — trop de commodité; l'approximation fut inventée par les impressionnistes.) ■ J'écris ce manifeste pour montrer qu'on peut faire les actions opposées ensemble, dans une seule fraîche respiration; je suis contre l'action; pour la continue contradiction pour l'affirmation aussi, je ne suis ni pour ni contre et je n'explique car je hais le bon-sens.

DADA — voilà un mot qui mène les idées à la chasse; chaque bourgeois est un petit dramaturge, invente des propos différents, au lieu de placer les personnages convenables à la qualité de son intelligence, chrysalides sur les chaises, cherche les causes ou les buts (suivant la méthode psycho-analytique qu'il pratique) pour cimenter son intrigue, histoire qui parle et se définit. ■ Chaque spectateur est un intriguant, s'il cherche à expliquer un mot (connaître!) Du refuge ouaté des complications serpentes il laisse manipuler ses instincts. De là les malheurs de la vie conjugale. Expliquer: Amusement des ventreros aux moulins de crânes vides.

■ Dada ne signifie rien.

Si l'on trouve futile et l'on ne perd son temps pour un mot qui ne signifie rien. . . . La première pensée qui tourne dans ces têtes est d'ordre bactériologique: trouver son origine étimologique, historique ou psychologique, au moins. On apprend dans les journaux que les nègres Krou appellent la queue d'une vache sainte: DADA. Le cube et la mère en une certaine contrée d'Italie: DADA. Un cheval en bois, la nourrice, double affirmation en russe et en roumain: DADA. Des savants journalistes y voient un art pour les bébés, d'autres saints Jésus appellants les petits enfants du jour, le retour à un primitivisme sec et bruyant, bruyant et monotone. ■ On ne construit sur un mot la sensibilité; toute construction converge à la perfection qui ennuie, idée stagnante d'un marécage doré, relatif produit humain. L'œuvre d'art ne doit pas être la beauté en elle-même, car elle est morte; ni gaie ni triste, ni claire ni obscure, réjouir ou maltraiter les individualités en

leur servant les gâteaux des auréoles saintes ou les sueurs d'une course cambré à travers les atmosphères. Une œuvre d'art n'est jamais belle, par décret, objectivement, pour tous. La critique est donc inutile, elle n'existe que subjectivement, pour chacun, et sans le moindre caractère de généralité. Croit-on avoir trouvé la base psychique commune à toute l'humanité? L'essai de Jésus et la bible couvrent sous leurs ailes larges et bien-veillantes: la merde, les bêtes, les journées. Comment veut-on ordonner le chaos qui constitue cette infinie informe variation: l'homme? Le principe: „aime ton prochain" est une hypocrisie. „Connais-toi" est une utopie, mais plus acceptable, contient la méchanceté aussi. Pas de pitié. Il nous reste après le carnage, l'espoir d'une humanité purifiée.

Je parle toujours de moi puisque je ne veux convaincre, je n'ai pas le droit d'entraîner d'autres dans mon fleuve, je n'oblige personne à me suivre et tout le monde fait son art à sa façon, s'il connaît la joie montant en flèches vers les couches astrales, ou celle qui descend dans les mines aux fleurs de cadavres et de spasmes fertiles. Stalactytes: les chercher partout, dans les crèches agrandies par la douleur, les yeux blancs comme les lièvres des anges. ■ Ainsi naquit DADA*) d'un besoin d'indépendance, de méfiance envers la communauté. Ceux qui appartiennent à nous gardent leur liberté. Nous ne reconnaissons aucune théorie. Nous avons assez des académies cubistes et futuristes: laboratoires d'idées formelles. Fait-on l'art pour gagner l'argent et caresser les gentils bourgeois? Les rimes sonnent l'assonance des monnaies et l'inflexion glisse le long de la ligne du ventre en profil. Tous les groupements d'artistes ont abouti à cette banque en chevauchant sur de diverses comètes. La porte ouverte aux possibilités de se vautrer dans les coussins et la nourriture.

Ici nous jettons l'ancre, dans la terre grasse. Ici nous avons le droit de proclamer, car nous avons connu les frissons et l'éveil. Revenants ivres d'énergie nous enfonçons le triton dans la chair insoucieuse. Nous sommes ruissellements de malédictions en abondance tropique de végétations vertigineuses, gomme et pluie est notre sueur, nous saignons et brûlons la soif, notre sang est vigueur.

Le cubisme naquit de la simple façon de regarder l'objet: Cézanne peignait une tasse 20 centimètres plus bas que ses yeux, les cubistes la regardent tout d'en haut; d'autres compliquent l'apparence en faisant une section perpendiculaire et en l'arrangeant sagement à côté. (Je n'oublie pourtant les créateurs, ni les grandes raisons et la matière qu'ils rendirent définitive.) ■ Le futuriste voit la même tasse en mouvement, succession d'objets un à côté de l'autre et ajoute malicieusement quelques lignes-forces. Cela n'empêche que la toile soit une bonne ou mauvaise peinture destinée au placement des capitaux intellectuels. Le peintre nouveau crée un monde, dont les éléments sont aussi les moyens, une œuvre sobre et définie, sans argument. L'artiste nouveau proteste: il ne peint plus /reproduction symbolique et illusionniste/ mais crée directement en pierre, bois, fer, étain, des rocs des organismes locomotives pouvant être tournés de tous les côtés par le vent limpide de la sensation momentanée. ■ Toute œuvre picturale ou plastique est inutile:

*) en 1916 dans le CABARET VOLTAIRE à Zurich.

chance and play at the center
of human activity — as an
antithesis to war and
ideology

Tristan Tzara

Marcel Duchamp

Chance
no longer
comes
from chaos,
but from
instruction.

Through Daisetz Teitaro Suzuki, Cage becomes deeply influenced by Zen Buddhism, which offers a radically different view of reality: the world does not need interpretation.

ouliipo (Fr. Ouvroir de Litterature Potentielle = Workshop for Potential Literature) **1** a French literary movement involving Raymond Queneau, Jacques Roubaud, Italo Calvino, and others **2** a combination of mathematics and poetry **3** texts generated using constraints or rules

the stricter the rule, the
more freedom it generates.

*Le roi de la pampa retourne sa chemise
pour la mettre à sécher aux cornes des taureaux
le cornédôif en boîte empest la remise
et fermentent de même et les cuirs et les peaux
Je me souviens encor de cette heure exquise
les gauchos dans la plaine agitaient leurs drapeaux
nous avions aussi froid que nus sur la banquise
lorsque pour nous distraire y plantions nos tréteaux
Du pôle à Rosario fait une belle trotte
aventures on eut qui s'y pique s'y frotte
lorsqu'on boit du maté l'on devient argentin
L'Amérique du Sud séduit les équivoques
exaltent l'espagnol les oreilles baroques
si la cloche se tait et son terlintintin*

The Parthenon horse broods upon his woes
And spurs his nag to one last gallopade
Lord Elgin never up his nostrils blows
While chinwagging upon the esplanade
We groaned in gastronomic ecstasy
To be with corned beef (bully!) so replete
The gauchos' wives invited us to tea
And dreamed of summering in sun-kissed Crete
Folk make a song and dance about folklore
The hoi polloi too had their share of wit
Though Socrates of wisdom had most store
For art and sculpture, too, Greece did her bit
With paradox this land is deep imbued
Outside the BM all night we have queued

Raymond Queneau,
One Hundred
Thousand Billion Poems

- The result does not pre-exist — it emerges.
- The work exists as execution, not as a stored form.
- The author designs rules, not outcomes.
- Each realization is different, dependent on time, environment, bodies, data.
- Chance is no longer external to the work — it is built in.
- Noise and randomness are no longer errors.

The artist becomes a
programmer of situations

KEY TAKEAWAYS

- After the catastrophes of the 20th century, authority loses legitimacy.
- Dada introduces chance as rupture.
- Fluxus transforms chance into a consequence of rules.
- Authorship dissolves into executable situations.
- Constraint replaces inspiration.
- The artist becomes a designer of systems. Outcomes do not pre-exist; they emerge through execution. Chance is no longer an error or accident — it is a built-in parameter of the work itself.

WHEN ERROR BECOMES INFORMATION: SYSTEMS, NOISE, AND GENERATIVE FORM

Robert Hodgin

randomness starts to be seen
as a source of knowledge
about the system itself

Through deviation, the system learns what is happening and adjusts its actions. Without deviation, the system is effectively blind.

Control is no longer imagined as the elimination of uncertainty, but as the capacity to work with it.

Vera Molnár dismantles is the illusion of the perfect machine. introduces the concept of the machine imaginaire

Her idea of controlled
chance functions as an
artistic equivalent of cybernetic
feedback.

without noise, the signal itself
cannot be measured.

Eduardo Mac Entyre and
Miguel Ángel Vidal, together
with the theorist Ignacio
Pirovano, publish the Arte
Generativo manifesto

Forma Generada en 3 ejes, ca.
1962, Eduardo Mac Entyre

not “here is the
artwork,” but “here is
a range of possible
states.”

**CONCEPTUAL ARTISTS ARE
MYSTICS RATHER THAN
RATIONALISTS. THEY LEAP TO
CONCLUSIONS THAT LOGIC
CANNOT REACH.**

- SENTENCES ON CONCEPTUAL ART (1968) - SOL LEWITT

Mac Entyre investigates how a system generates form from within the visual field itself, observing how rules unfold into optical effects, vibrations, and depth. LeWitt, by contrast, delegates form entirely.

Authorship resides in the design of a system capable of producing form without the artist's continuous intervention.

it is possible to think
systemically, to work with
rules, without relying on text,
language, or explicit
directives.

In LeWitt's work, the instruction functions as a mechanism for precise transmission of an idea.

In Fluxus, the instruction initiates an event. Event scores do not imply a "correct" outcome and are not evaluated based on fidelity to an original intention.

Aleatoric randomness is pure chance — like a dice throw — where a single random act directly determines the outcome.

Stochastic processes work with probability distributions. The system does not choose anything at all — it chooses within a defined range.

Pseudo-randomness is randomness generated by an algorithm rather than by true chaos.

In emergence randomness appears not because we introduced it, but because interactions within the system become opaque.

KEY TAKEAWAYS

- Mid-20th century science reframes randomness. In cybernetics and information theory, error and noise stop being failures and become sources of knowledge about how systems function.
- Systems can only regulate themselves through deviation; instability is not the opposite of order, but its condition.
- The artwork becomes the visible operation of a system, not a finished image.
- The work exists as a range of possible states. Series replace unique objects; each piece is one realization of a rule.
- The idea becomes a machine: authorship moves from execution to system design.
- LeWitt's instructions function as algorithms aimed at reproducibility; Fluxus instructions trigger events without a "correct" outcome.

The background of the slide is a complex, abstract composition. It features a marbled texture with swirling patterns in shades of brown, tan, and grey. Overlaid on this are several thick, dark, wavy lines that meander across the frame, creating a sense of movement and depth. The overall effect is organic and textured, reminiscent of natural stone or aged parchment.

DESIGNING SYSTEMS

Robert Hodgins

Procedural generative art operates through procedures, steps, instructions, and actions unfolding over time.

Algorithmic generative art works with formalized rules, repetition, transformation, and code — or mental code.

Agent-based systems and cellular automata rely on local rules, interactions between elements, and the emergence of global patterns.

Data-driven generative art treats data itself as material — transforming streams, visualizing or abstracting them.

Hybrid systems — including NFTs and blockchain-based works — combine generation with economics: seeds, rarity, and the market itself become part of the system.

ALGORITHMIC GENERATIVE ART

order begins to “loosen”
from within a rule

Georg Nees, Schotter (1968–70)

the image is only
evidence that the
algorithm ran.

Frieder Nake Hommage à Paul
Klee, 13/9/65 Nr.2 (1965; variants
produced between 1965–67)

The Mandelbrot set

Form does not
depict nature; it
emerges the
way nature
emerges

Roman Verostko

Manfred Mohr

```

float noise(float x, float y) {
    float result = 0.0f;
    int cell_x = floorf(x); // provide surflet grids
    int cell_y = floorf(y); // provide surflet grids
    for (int grid_y = cell_y; grid_y <= cell_y + 1; ++grid_y)
        for (int grid_x = cell_x; grid_x <= cell_x + 1; ++grid_x) {
            // random hash
            int hash = perm[(perm[grid_x & mask] + grid_y) & mask];
            // grads_x[hash], grads_y[hash] provide random vector
            result += surflet(x - grid_x, y - grid_y, grads_x[hash], grads_y[hash]);
        }
    return result;
}

```

With Verostko, the rule grows.

With Mohr, the rule exhausts itself.

With Perlin noise, the rule disguises itself as chaos.

Jared Tarbell

CELLULAR AUTOMATA

No cell has knowledge of the whole.
There is no central control, no global plan, no “view from above.”
From these microscopic rules, macroscopic structures emerge.

John Conway, The Game of Life

- Red — puffer-type breeder This is a moving structure that: travels across the grid, leaves new structures behind it, is not programmed to “create” anything — it simply behaves this way. The puffer does not know that it is producing anything.
- Green — glider guns. These are stationary structures that: regularly emit moving objects, continue doing so indefinitely, as long as the system exists. No one assigned them the task of “shooting.” They do so inevitably because of the configuration of the cells.
- Blue — gliders. These are moving patterns: they “glide” across the field, maintain their shape, can collide with other structures and influence the system. They are often referred to as the “particles” of the Game of Life.

- Form is temporal, not static
- Composition is replaced by growth
- The artwork is a process, not an object
- Meaning emerges rather than being imposed.

Process 13 Software, Casey Reas, 2011

Jonathan McCabe

THE CHEMICAL BASIS OF MORPHOGENESIS

By A. M. TURING, F.R.S. *University of Manchester*

(Received 9 November 1951—Revised 15 March 1952)

It is suggested that a system of chemical substances, called morphogens, reacting together and diffusing through a medium, is adequate to account for the main phenomena of morphogenesis.

simple local interactions between chemical substances, acting over time on a two-dimensional field, are sufficient to generate highly organized and differentiated forms.

DATA-DRIVEN GENERATIVE ART

Aspect	Cellular Automata (Internal Time)	Data-Driven (Archival Time)
Source of Form	Rules → Emergent Complexity	Data → Algorithm
Role of Time	Generator (tick → transformation)	Material ("scrolling" the archive)
Viewer	Observes the process	Immerses in the already-passed
Control	Artist sets rules	Artist curates data/prompt

GENERATIVE ART ON THE BLOCKCHAIN

artblocks.io

**ERIC CALDERON OF ART BLOCKS -
THE FIRST INTERACTIVE NFT
GENERATIVE ART PLATFORM,
AND MORE...**

The artwork does not exist until minting.

The collector activates the algorithm, which generates a unique, irreversible form for the first and only time.

The artist gives up control.

Once published, the code executes and authenticates itself, extending Sol LeWitt's "art as a machine" into legal autonomy.

Value shifts to the system.

What is monetized is not the image, but the rule; the collector trusts the process, not the artist's taste.

Blockchain changes the nature of the artwork.

On-chain generative art is not an object or an AI model, but an autonomous event — a law released into the world.

Tyler Hobbs — Fidenza (2021)

Dmitri Cherniak, Ringers

William Mapan

Emily Xie

KEY TAKEAWAYS

- Generative art is defined by a way of thinking, not by style or technology.
- Different generative systems ask different questions. Procedural systems focus on actions over time; algorithmic systems on rules and reproducibility; agent-based systems on emergence and behavior; data-driven systems on translating reality; on-chain systems on autonomy and execution.
- With computers, systems become executable. One algorithm can generate infinite variations; form becomes a trace of a procedure rather than an expressive gesture.
- Across all these systems, the artwork is not an object but a field of possible states. Meaning does not precede form — it emerges through execution.

The background of the slide is a painting by Nicholas Roerich titled 'The Himalayas' (1911). It depicts a vast, mountainous landscape under a dramatic, cloudy sky. In the foreground, a figure is seated on a rock, looking towards the mountains. The overall color palette is dominated by deep blues, purples, and yellows, creating a sense of mystery and grandeur.

Creation was never a solitary act of expression; the environment was a co-creative force.

What we see today is a continuation of this logic, translated into a technological context.

What part of my work am I still trying to fully control — and why do I need that **guarantee**? What fear would appear if I allowed that part to remain undecided?

If my artwork were a system rather than an object, **what rules** would actually govern it — and which ones am I pretending are neutral? What happens if I make those rules visible instead of hiding them inside form?

Where in my process could **an error** stop being a failure and start becoming information?

What do I want to be **the author of**: the image, or the conditions under which the image emerges? If I step back, what would continue acting in my place?

How much **uncertainty** am I willing to allow — not aesthetically, but existentially — in my practice right now?

Studio Reflections

The brain is a reducing valve.

For Huxley, perception is not access to reality — it is a syntax imposed on it.

**CONCEPTUAL ARTISTS ARE
MYSTICS RATHER THAN
RATIONALISTS. THEY LEAP TO
CONCLUSIONS THAT LOGIC
CANNOT REACH.**

- SENTENCES ON CONCEPTUAL ART (1968) - SOL LEWITT

Art as a form of
knowing
